Emma Brindley has investigated the responses of European robins to the songs of neighbors and strangers. Despite the large and complex song repertoire of European robins, they were able to discriminate between the songs of neighbors and strangers. When they heard a recording of a stranger, they began to sing sooner, sang more songs, and overlapped their songs with the playback more often than on hearing a neighbor's song. As Brindley suggests, the overlapping of song may be an aggressive response. However, this difference occurred only when the neighbor's song was played at the boundary between that neighbor's territory and the territory of the bird being tested. If the same song was played at another boundary, it was treated as the call of a stranger. Not only does this result demonstrate that 34, but it also shows that the choice of songs is highly important.

빈칸에 들어갈 말로 가장 적절한 것은?

- ① variety and complexity characterize the robins' songs
- ② song volume affects the robins' aggressive behavior
- ③ poor territorial sense is a key to survival
- ④ the robins associate locality with familiar songs

밑줄 친 the boost is grounded in fiction이 다음 글에서 의미 Basing your self-worth on climbing performance puts you at the whim of external factors. These factors may be random and misleading. Comparison is one source of illusion. **인과** Perhaps you felt that you performed well on a certain climb **because** your partner was having an off day and found the climbing very difficult. **한정** You found it **only** slightly difficult and conclude that you were climbing quite well, when in fact you were climbing no better than usual. Or, your partner was at the top of his game. You felt weak in comparison, when in fact, objectively, you put in a very strong performance. Environmental factors may be involved. Perhaps you mastered your day's objective due to especially favorable conditions, such as low humidity, when in fact, you really didn't climb particularly well. In all these cases, the good or bad feelings you have are not based on something you can take credit for. If the performances boost your self-worth, the boost is grounded in fiction.

공식 밑줄 친(긍정/부정) 판정 → 뜻을 추상화한 선지

주장 밑줄 친 a nonstick frying pan이 다음 글에서 의미하는 바로 How you focus your attention plays a **critical** role in how you deal with stress. **인과** Scattered attention harms your ability to let go of stress, **because** even though your attention is scattered, it is narrowly focused, for you are able to fixate **only** on the stressful parts of your experience. When your attentional spotlight is widened, you can more easily let go of stress. You can put in perspective many more aspects of any situation and not get locked into one part that ties you down to superficial and anxiety-provoking levels of attention. **역접** A narrow focus heightens the stress level of each experience, **but** a widened focus turns down the stress level **because** you're better able to put each situation into a broader perspective. **주장** One anxiety-provoking detail is less **important** than the bigger picture. It's like transforming yourself into a nonstick frying pan. **역접** You can **still** fry an egg, **but** the egg won't stick to the pan.

공식 밑줄 친(긍정/부정) 판정 → 뜻을 추상화한 선지

- ① never being confronted with any stressful experiences in daily life
- ② broadening one's perspective to identify the cause of stress
- ③ rarely confining one's attention to positive aspects of an experience
- ④ having a larger view of an experience beyond its stressful aspects
- ⑤ taking stress into account as the source of developing a wide view

밑줄 친 “view from nowhere”가 다음 글에서 의미하는 바로 Our view of the world is not given to us from the outside in a pure, objective form; it is shaped by our mental abilities, our shared cultural perspectives and our unique values and beliefs. This is not to say that there is no reality outside our minds or that the world is just an illusion. It is to say that our version of reality is precisely that: our version, not the version. There is no single, universal or authoritative version that makes sense, other than as a theoretical construct. **인과** We can see the world **only** as it appears to us, not “as it truly is,” **because** there is no “as it truly is” without a perspective to give it form. **인과** Philosopher Thomas Nagel argued that there is no “view from nowhere,” **since** we cannot see the world **except** from a particular perspective, and that perspective influences what we see. **한정** We can experience the world **only** through the human lenses that make it intelligible to us.

공식 밑줄 ㅅ(긍정/부정) 판정 → 뜻을 추상화한 선지

- ① perception of reality affected by subjective views
- ② valuable perspective most people have in mind
- ③ particular view adopted by very few people
- ④ critical insight that defeats our prejudices
- ⑤ unbiased and objective view of the world

In fact, scientists attributing consciousness to any animal is so recent that the internet is older. **주장** In 1976 a zoologist named Donald Griffin published The Question of Animal Awareness, a book arguing that animal cognition **ought to** be taken seriously. He and a colleague had been responsible in 1944 for discovering that bats navigate by echolocation. Now, after a lifetime spent watching those creatures, he became convinced they had inner worlds. They had flexible behavior, he said, or the ability to change their behavior as external circumstances changed, a hallmark of true intelligence. He’d watched bats develop clever techniques for finding food; they could clearly make decisions on the fly, and exhibited many of the same problem-solving abilities as humans did. **주장** Animal thought and reason **ought to** be seriously studied, he argued. **역접** After all, despite the flourishing of neuroscience, no one had **yet** found any part of the brain unique to humans that might be responsible for this hallowed “consciousness.” Wasn’t it time to give up the ghost?

공식 밑줄 ㅅ(긍정/부정) 판정 → 뜻을 추상화한 선지

- ① the claim that animal consciousness should be studied
- ② the belief that consciousness is a quality exclusive to humans
- ③ the illusion that animals possess truly conscious inner worlds
- ④ the idea that human cognition is superior to that of animals
- ⑤ the concept that humans and animals are essentially alike

밑줄 친 come back home again이 다음 글에서 의미하는 바로 Here is a fundamental quality of music. **인과** Note names repeat **because** of a **perceptual phenomenon that corresponds to the doubling and halving of frequencies**. When we double or halve a frequency, we end up with a note that sounds remarkably similar to the one we started out with. This relationship, a frequency ratio of 2:1 or 1:2, is called the octave. It is so important that, in spite of the large differences that exist between musical cultures, every culture we know of has the octave as the basis for its music, even if it has little else in common with other musical traditions. **인과** This phenomenon **leads to** the notion of circularity in pitch **perception, and is similar to circularity in colors**. Although red and violet fall at opposite ends of the continuum of visible frequencies of electromagnetic energy, we see them as perceptually similar. The same is true in music, and music is often described as having two dimensions, one that accounts for tones going up in frequency and another that accounts for the perceptual sense that we've come back home again each time we double a tone's frequency.

공식 밑줄 ㄱ(긍정/부정) 판정 → 뜻을 추상화한 선지

- ① identified tonal differences within the same octave
- ② returned to the original note with an identical frequency
- ③ reached a note named the same but with a different pitch
- ④ restored musical sensitivity by adapting to various octaves
- ⑤ constructed frequency patterns from notes with the same name

밑줄 친 a stick in the bundle이 다음 글에서 의미하는 바로 Lawyers sometimes describe ownership as a bundle of sticks. This metaphor was introduced about a century ago, and it has dramatically transformed the teaching and practice of law. **인과** The metaphor is useful **because** it helps **us see ownership as a grouping of interpersonal rights that can be separated and put back together**. When you say It's mine in reference to a resource, often that means you own a lot of the sticks that make up the full bundle: the sell stick, the rent stick, the right to mortgage, license, give away, even destroy the thing. Often, though, we split the sticks up, as for a piece of land: there may be a landowner, a bank with a mortgage, a tenant with a lease, a plumber with a license to enter the land, an oil company with mineral rights. Each of these parties owns a stick in the bundle.

공식 밑줄 ㄱ(긍정/부정) 판정 → 뜻을 추상화한 선지

- ① a legal obligation to develop the resource
- ② a priority to legally claim the real estate
- ③ a right to use one aspect of the property
- ④ a building to be shared equally by tenants
- ⑤ a piece of land nobody can claim as their own

밑줄 친 make oneself public to oneself 가 다음 글에서 의미 Coming of age in the 18th and 19th centuries, the personal diary became a centerpiece in the construction of a modern subjectivity, at the heart of which is the application of reason and critique to the understanding of world and self, which allowed the creation of a new kind of knowledge. Diaries were central media through which enlightened and free subjects could be constructed. They provided a space where one could write daily about her whereabouts, feelings, and thoughts. Over time and with rereading, disparate entries, events, and happenstances could be rendered into insights and narratives about the self, and allowed for the formation of subjectivity. It is in that context that the idea of “the self [as] both made and explored with words” emerges. Diaries were personal and private; one would write for oneself, or, in Habermas’s formulation, one would make oneself public to oneself. By making the self public in a private sphere, the self also became an object for self-inspection and self-critique.

공식 밑줄 친(긍정/부정) 판정 → 뜻을 추상화한 선지

- ① use writing as a means of reflecting on oneself
- ② build one’s identity by reading others’ diaries
- ③ exchange feedback in the process of writing
- ④ create an alternate ego to present to others
- ⑤ develop topics for writing about selfhood

주장 밑줄 친 from their verandas가 다음 글에서 의미하는 바로 Around the turn of the twentieth century, anthropologists trained in the natural sciences began to reimagine what a science of humanity **should** look like and how social scientists **ought to** go about studying cultural groups.

주장 Some of those anthropologists insisted that one **should** at least spend significant time actually observing and talking to the people studied. Early ethnographers such as Franz Boas and Alfred Cort Haddon typically traveled to the remote locations where the people in question lived and spent a few weeks to a few months there. They sought out a local Western host who was familiar with the people and the area (such as a colonial official, missionary, or businessman) and found accommodations through them. Although they did at times venture into the community without a guide, they generally did not spend significant time with the local people. **결론** **Thus**, their observations were primarily conducted from their verandas.

공식 밑줄 친(긍정/부정) 판정 → 뜻을 추상화한 선지

- ② participating in collaborative research with natural scientists
- ③ engaging in little direct contact with the people being studied

- ⑤ struggling to take a wider view of the native culture examined

Being able to prioritize your responses allows you to connect more deeply with individual customers, be it a one-off interaction around a particularly delightful or upsetting experience, or the development of a longer-term relationship with a significantly influential individual within your customer base. If you've ever posted a favorable comment — or any comment, for that matter — about a brand, product or service, think about what it would feel like if you were personally acknowledged by the brand manager, for example, as a result. **인과** In general, people post **because** they have something to say — and **because** they want to be recognized for having said it. In particular, when people post positive comments they are expressions of appreciation for the experience that led to the post. While a compliment to the person standing next to you is typically answered with a response like “Thank You,” the sad fact is that most brand compliments go unanswered. These are lost opportunities to understand what drove the compliments and create a solid fan based on them.

인과 One reason that people participate in social media is **because** it builds social relations. We increase our social capital when we successfully engage in social media. Social capital describes the networks of relationships we have that are built on mutuality and sharing of identity, understanding, norms and values. We build ties that may pay off with a job lead or a letter of recommendation. We reinforce our identities through our online presentation in a personal blog or our profile. “The premise behind the notion of social capital is rather simple and straightforward: investment in social relations with expected returns,” noted sociologist Nan Lin. Lin’s work stresses that it is who you know as much as what you know that shapes our experience in society. With new media, our reach of connecting is all the greater, expanding our “who you know” to greater and greater lengths.

Urban delivery vehicles can be adapted to better suit the density of urban distribution, which often involves smaller vehicles such as vans, including bicycles. The latter have the potential to become a preferred ‘last-mile’ vehicle, particularly in high-density and congested areas. In locations where bicycle use is high, such as the Netherlands, delivery bicycles are also used to carry personal cargo (e.g. groceries). Due to their low acquisition and maintenance costs, cargo bicycles convey much potential in developed and developing countries alike, such as the becak (a three-wheeled bicycle) in Indonesia. Services using electrically assisted delivery tricycles have been successfully implemented in France and are gradually being adopted across Europe for services as varied as parcel and catering deliveries. Using bicycles as cargo vehicles is particularly encouraged when combined with policies that restrict motor vehicle access to specific areas of a city, such as downtown or commercial districts, or with the extension of dedicated bike lanes.

Information and meaning are, clearly, not the same thing. The former refers to uninterpreted data or sensory states whose probability in a certain situation can be easily measured; the latter refers to the interpretation of the data or sensory states, including the special kinds of nuances and values that the information entails, or is intended to have, in the given situation. This applies to any type of information, from alarm signals to sophisticated statements. Take, for instance, a coin-tossing game in which it is decided that throwing three heads in a row constitutes a win. If a certain player ends up consistently with the desired outcome, defeating all who challenge that player, then we tend to interpret the outcome either as the work of Fortune, or else as clever and undetectable cheating on the part of the winning player. Interpretation is at the core of everything we do, think about, and feel.

Car manufacturers know people form emotional attachments to automobile ‘faces’ and use the fact to guide their design and marketing efforts. “In today’s hyper-competitive car market, designers are focusing on faces as part of a broader effort to design cars that appeal to buyers — tapping psychologists, anthropologists and other experts in human behavior, and even monitoring the brain waves of focus-group participants,” the Wall Street Journal reported in a 2006 article entitled ‘Why Cars Got Angry.’ Automotive research shows “70% of drivers identify and judge vehicles by the headlights and grille,” the article reported. In the first years of the twenty-first century, the trend was toward angrier, scarier vehicles’ faces. The article hypothesized that these faces help drivers feel safer in heavier traffic amidst more oversize SUVs. Reflecting our tumultuous times, the ‘scary look’ shows no sign of slowing in the new millennium. “Buoyant sales of cars with styling which suggests power or bad temper seem to confirm that customers are happy with this look,” an international automotive site reported in 2017.

Even though there is good reason to consider a dog a sentient being capable of making choices and plans — so that we might suppose ‘it could have conceived of acting otherwise’ — we’re unlikely to think it is wicked and immoral for attacking a child. Moral responsibility is not some universal concept like entropy or temperature — something that applies equally, and can be measured similarly, everywhere in the cosmos. It is a notion developed specifically for human use, no more or less than languages are. Considerable work by cultural psychologists and anthropologists has shown that there are indeed large and sometimes surprising differences in the words and concepts that different cultures have for describing emotions, as well as in the social circumstances that draw out the expression of particular emotions. **역접 However**, those data do not actually show that different cultures have different emotions, if we think of emotions as central, neurally implemented states. As for, say, color vision, they just say that, despite the same internal processing architecture, how we interpret, categorize, and name emotions varies according to culture and that we learn in a particular culture the social context in which it is appropriate to express emotions. **역접 However**, the emotional states themselves are likely to be quite invariant across cultures. **역접** In a sense, we can think of a basic, culturally universal emotion set that is shaped by evolution and implemented in the brain, **but** the links between such emotional states and stimuli, behavior, and other cognitive states are plastic and can be modified by learning in a specific cultural context.

Managers of natural resources typically face market incentives that provide financial rewards for exploitation. For example, owners of forest lands have a market incentive to cut down trees rather than manage the forest for carbon capture, wildlife habitat, flood protection, and other ecosystem services. **결론** These services provide the owner with no financial benefits, and **thus** are unlikely to influence management decisions. **역접 But** the economic benefits provided by these services, based on their non-market values, may exceed the economic value of the timber. For example, a United Nations initiative has estimated that the economic benefits of ecosystem services provided by tropical forests, including climate regulation, water purification, and erosion prevention, are over three times greater per hectare than the market benefits. **결론 Thus** cutting down the trees is economically inefficient, and markets are not sending the correct “signal” to favor ecosystem services over extractive uses.

주장 An **important** advantage of disclosure, as opposed to more aggressive forms of regulation, is its flexibility and respect for the operation of free markets. Regulatory mandates are blunt swords; they tend to neglect diversity and may have serious unintended adverse effects. For example, energy efficiency requirements for appliances may produce goods that work less well or that have characteristics that consumers do not want. **역접** Information provision, **by contrast**, respects freedom of choice. If automobile manufacturers are required to measure and publicize the safety characteristics of cars, potential car purchasers can trade safety concerns against other attributes, such as price and styling. If restaurant customers are informed of the calories in their meals, those who want to lose weight can make use of the information, leaving those who are unconcerned about calories unaffected. **주장** Disclosure does not interfere with, and **should** even promote, the autonomy (and quality) of individual decision-making.

There are pressures within the museum that cause it to emphasise what happens in the galleries over the activities that take place in its unseen zones. In an era when museums are forced to increase their earnings, they often focus their energies on modernising their galleries or mounting temporary exhibitions to bring more and more audiences through the door. In other words, as museums struggle to survive in a competitive economy, their budgets often prioritise those parts of themselves that are consumable: infotainment in the galleries, goods and services in the cafes and the shops. The unlit, unglamorous storerooms, if they are ever discussed, are at best presented as service areas that process objects for the exhibition halls. And at worst, as museums pour more and more resources into their publicly visible faces, the spaces of storage may even suffer, their modernisation being kept on hold or being given less and less space to house the expanding collections and serve their complex conservation needs.

The primary purpose of commercial music radio broadcasting is to deliver an audience to a group of advertisers and sponsors. **주장** To achieve commercial success, that audience **must** be as large as possible. More than any other characteristics (such as demographic or psychographic profile, purchasing power, level of interest, degree of satisfaction, quality of attention or emotional state), the quantity of an audience aggregated as a mass is the most significant metric for broadcasters seeking to make music radio for profitable ends. **결론** As a result, broadcasters attempt to maximise their audience size by playing music that is popular, or — at the very least — music that can be relied upon not to cause audiences to switch off their radio or change the station. Audience retention is a key value (if not the key value) for many music programmers and for radio station management. This is clearly a case of what French sociologist Henri Lefebvre has called “the decline of the referentials,” or the tendency of words under the influence of capitalism to become separated from meaningful associations. Increasingly, food ads helped shoppers become accustomed to new definitions of words such as “fresh” and “natural,” definitions that could well be considered opposite of their traditional meanings. The concept of overtourism rests on a particular assumption about people and places common in tourism studies and the social sciences in general. Both are seen as clearly defined and demarcated. People are framed as bounded social actors either playing the role of hosts or guests. Places, in a similar way, are treated as stable containers with clear boundaries. **결론** **Hence**, places can be full of tourists and **thus** suffer from overtourism. **역접** **But** what does it mean for a place to be full of people? Indeed, there are examples of particular attractions that have limited capacity and where there is actually no room for more visitors. This is not least the case with some man-made constructions such as the Eiffel Tower. However, with places such as cities, regions or even whole countries being promoted as destinations and described as victims of overtourism, things become more complex. Hyper-mobility — the notion that more travel at faster speeds covering longer distances generates greater economic success — seems to be a distinguishing feature of urban areas, where more than half of the world's population currently reside. By 2005, approximately 7.5 billion trips were made each day in cities worldwide. In 2050, there may be three to four times as many passenger-kilometres travelled as in the year 2000, infrastructure and energy prices permitting. Freight movement could also rise more than threefold during the same period. Mobility flows have become a key dynamic of urbanization, with the associated infrastructure invariably constituting the backbone of urban form. **역접 Yet, despite the increasing level of urban mobility worldwide, access to places, activities and services has become increasingly difficult.** **역접 Not only** is it less convenient — in terms of time, cost and comfort — to access locations in cities, **but** the very process of moving around in cities generates a number of negative externalities. Before the 1950s, tourism was very much an industry which was fragmented; hotels, transport operators, travel agents, and tour operators all tended to work independently of each other. Hotels were largely in the business of selling bed nights. Airlines and railways were in the business of selling seats. **역접 Travel agents, of course, were selling travel and holidays, but in each case they tended to operate very much as individual businesses.** From the mid-1950s onwards, particularly in the UK, the growth of tour operators began to change the nature of the industry from essentially individual business activities to more integrated activities. Hotels, for example, were beginning to see customers as wanting a range of services rather than simply buying accommodation. So hotels began to develop shopping arcades and later to offer secretarial centres to try to increase the spend of guests within the hotel complex. Transport operators, particularly in the airline business, saw the sale of transport services as being integral to a much wider need. Airlines offered insurance and accommodation booking for travellers.

주장 Food, as we all know, is **essential** for human life. It also is the basis for several major industries found in many countries around the world such as in agriculture, food processing, food retailing and food service. For millennia, the focus of those involved with food as a human and economic phenomenon was on its production, preservation, distribution, pricing and other practical concerns. **역접 But** in the late 18th century this began to change. Food became more than just a life necessity. **역접** Restaurants began to be developed, initially in France **but** eventually in other nations, as a distinct institution offering people dining choices and table service, the opportunity for socialization and, over time, a finer and finer atmosphere. The rise of restaurants eventually led to a class of diners who prided themselves on being critics of taste, food and cooking. Brillat-Savarin is probably the best known of the ‘culinary philosophers’ or, in today’s parlance, a ‘foodie’. Self-driving cars, where a person turns on and off the driving, is an example of a joint cognitive system. Entertainment robots are examples of mixed teams as are robots for telecommuting. The design process concentrates on how the agents will cooperate and coordinate with each other to accomplish the team goals. Rather than treating robots as peer agents with their own completely independent agenda, joint cognitive systems approaches treat robots as helpers such as service animals or sheep dogs. In joint cognitive system designs, artificial intelligence is used along with human-robot interaction principles to create robots that can be intelligent enough to be good team members.

Monasteries were the engine rooms of the Middle Ages. At the height of their activities and influence, monasteries provided intellectual leadership for the institutions of Church and civil governments, innovation in religious thought and practice, medical provision, education, visual culture and agricultural development. They did all this while apparently observing self-imposed isolation from the wider community. For monasteries were intended to function as places set apart from the world, in which monks devoted their lives to a permanent rhythm of religious observance, prayer and study. Religious prayer and praise lay at the heart of monasticism. Both those following this life and those outside believed that monastic lives were led for the benefit of wider society, and that the sacrifices made by monks in separating themselves from 'normal' human contact functioned as penances on behalf of the community as well as for their own deliverance. Monks were regarded as leading parallel lives that had the power to save themselves and others.

역접 Not **only** musicians and psychologists, **but** also committed music enthusiasts and experts often voice the opinion that the beauty of music lies in an expressive deviation from the exactly defined score. Concert performances become interesting and gain in attraction from the fact that they go far beyond the information printed in the score. 한정 In his early studies on musical performance, Carl Seashore discovered that musicians **only** rarely play two equal notes in exactly the same way. Within the same metric structure, there is a wide potential of variations in tempo, volume, tonal quality and intonation. 역접 Such variation is based on the composition **but** diverges from it individually. We generally call this 'expressivity'. This explains why we do not lose interest when we hear different artists perform the same piece of music. Mending and restoring objects often require even more creativity than original production. The preindustrial blacksmith made things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine. **결론** Customers would bring things back if something went wrong; repair was **thus** an extension of fabrication. With industrialization and eventually with mass production, making things became the province of machine tenders with limited knowledge. **역접** **But** repair continued to require a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. As far back as 32,000 years ago, prehistoric cave artists skillfully used modeling shadows to give their horses and bison volume. A few thousand years ago ancient Egyptian and then ancient Greek art presented human forms in shadow-style silhouette. **역접** **But** cast shadows do not appear in Western art until about 400 BCE in Athens. **한정** It was **only** after shadows had become an established, if controversial, part of representation that classical writers claimed that art itself had begun with the tracing of a human shadow. Greeks and Romans were the first to make the transition from modeling shadows to cast shadows, a practice that implied a consistent light source, a fixed point of view, and an understanding of geometric projection. In fact, what we might now call "shadow studies" — the exploration of shadows in their various artistic representations — has its roots in ancient Athens. **인과** Ever **since**, the practice of portraying shadows has evolved along with **critical** analysis of them, as artists and theoreticians have engaged in an ongoing debate about the significance of shadow representation.

Taken as near synonyms, their meaning is to maintain an object or system insofar as possible in its present state, to protect it from change, usually for contemplation, research, display, and perhaps for use. 주장 The most commonly known form of results-based pricing is a practice called contingency pricing, used by lawyers. **결론** (A) **Therefore**, **only** an outcome in the client's favor is compensated. **인과** From the client's point of view, the pricing makes sense in part **because** most clients in these cases are unfamiliar with and possibly intimidated by law firms. Their biggest fears are high fees for a case that may take years to settle. (B) By using contingency pricing, clients are ensured that they pay no fees until they receive a settlement. In these and other instances of contingency pricing, the economic value of the service is hard to determine before the service, and providers develop a price that allows them to share the risks and rewards of delivering value to the buyer. (C) Contingency pricing is the major way that personal injury and certain consumer cases are billed. In this approach, lawyers do not receive fees or payment until the case is settled, when they are paid a percentage of the money that the client receives. [3점]

(B) In this way, students learn to view their writing as someone else's reading and to improve both the expression of meaning and the form of their writing as they draft and redraft. Process writing shifts the emphasis in teaching writing from evaluation to revision. (C) Subsequently, teachers collect and evaluate what students have written. Such instruction is very 'product-oriented;' there is no involvement of the teacher in the act or 'process' of writing.

Mathematics had been going on for a long time before the dashes and squiggles were invented. **주장** (B) You would not be the first; rest assured, even professional mathematicians sometimes **have to** rely on discussions with colleagues to properly understand problems they are looking at. **역접** **But** how do you recognise some writing is mathematical in the first place? (C) Put simply, there has to be something mathematical going on for us to say that it is mathematics. And if we are dealing with writing from a very distant past, in a language that is not familiar to us, from a time even before recorded language, that can be sometimes difficult to recognise. [3점]

A good scientific theory always allows for the possibility of rejection. The fact that we have not found such a case in countless examinations of the fossil record strengthens the case for evolutionary theory. (B) The fossil record supports this prediction — multicelled organisms are found in layers of earth millions of years after the first appearance of single-celled organisms. Note that the possibility always remains that the opposite could be found. (C) Apart from demonstrating that evolution did occur, the fossil record also provides tests of the predictions made from evolutionary theory. For example, the theory predicts that single-celled organisms evolved before multicelled organisms.

인과 Negotiation can be defined as an attempt to explore and reconcile conflicting positions **in order to** reach an acceptable outcome. (A) Areas of difference can and do frequently remain, and will perhaps be the subject of future negotiations, or indeed remain irreconcilable. In those instances in which the parties have highly antagonistic or polarised relations, the process is likely to be dominated by the exposition, very often in public, of the areas of conflict. (B) In these and sometimes other forms of negotiation, negotiation serves functions other than reconciling conflicting interests. These will include delay, publicity, diverting attention or seeking intelligence about the other party and its negotiating position. (C) Whatever the nature of the outcome, which may actually favour one party more than another, the purpose of negotiation is the identification of areas of common interest and conflict. In this sense, depending on the intentions of the parties, the areas of common interest may be clarified, refined and given negotiated form and substance.

If we take an evolutionary look at our beginnings, we see a life in which high levels of physical activity were required for survival. **주장** (A) There are fewer manual jobs, we do not **need to** travel on foot, we do not **need to** hunt and harvest for our food, and many domestic chores have been **mechanized**. While these changes have created many benefits for our longevity and quality of life, they have also created many problems. (B) Lack of sufficient physical activity has now been linked to at least 17 unhealthy conditions, almost all of which are chronic diseases or considered risk factors for chronic diseases. Adrienne Hardman has summarized this serious situation for public health: "Physical inactivity is a waste of human potential for health and well-being." (C) Even one century ago, most people needed to be physically active to work, to travel, and to take care of homes and families. Our modern world has engineered such activity out of our lives.

통념 There's a reason for that: **traditionally**, park designers attempted to create such a feeling by planting tall trees at park boundaries, building stone walls, and constructing other means of partition. Parks take the shape demanded by the cultural concerns of their time. Science is sometimes described as a winner-take-all contest, meaning that there are no rewards for being second or third. This is an extreme view of the nature of scientific contests. To minimize vortex shedding, skyscraper designers do everything in their powers to confuse the wind. To minimize building costs and maximize revenues, skyscrapers generally take the shape of squares or rectangles. **인과** These are not particularly aerodynamic shapes, and this **results in a** wind phenomenon called “vortex shedding.” As wind meets a rectangular skyscraper it pushes on the flat face of the building before flowing around its sides, where eventually it separates from the face of the structure. (①) The difference in pressures on the front and back faces of the building gives rise to vortices, or spinning currents of wind, that flow downstream from the building. (②) The vortices pull and push the building in a direction perpendicular to the wind at frequencies that can become dangerously self-sustaining. (③) Orienting the building so that the longer face of the structure is parallel with prevailing winds can help.
